Intended for use with children 6-24 months
**Important Safety Information**

- **There is a gap between your gate frame and right upper corner. This is not a defect.** The gap will close once it is properly mounted.
- **Do not use the product if any components are broken or missing.** If parts are required please contact our Customer Service Department (contact information on the first page). Do not use replacement parts other than those approved by the manufacturer or distributor. Non-approved spare parts may render the repair or the product unsafe.
- **Check regularly that all fittings and components are secure and that no components are worn, broken or missing.**
- **Check regularly that all fittings are securely tightened and that the locking mechanism is working properly.**
- **Any damage to property during installation of your safety gate is the sole responsibility of the end user.**
- **We recommend that you carry out the installation away from small children as some components may present a choking hazard when loose.**

**WARNING**

- **Children have died or been seriously injured when gates are not securely installed.** ALWAYS install and use gates as directed using all required parts.
- **STOP using when a child can climb over or dislodge the gate.**
- **Install only with locking/latching mechanism securely engaged.**
- **To prevent falls, never use at top of stairs without mounting hardware.**
- **NEVER use to keep child away from pool.**
- **This product will not necessarily prevent all accidents.**
- **NEVER leave child unattended.**
- **This product is intended for use with children from 6 to 24 months of age.**
- **Periodically check all fasteners to be sure they are tight and secure, stop using gate if any parts are missing or become damaged.**
- **Hardware and mounting cups are included for use in solid materials only, such as wood or metal.**

Your safety gate contains the following:

- A. Extension Pins
- B. Tape Pads
- C. Screws
- D. Upper Bolt with Rubber Pads
- E. Upper Tension Knobs
- F. Upper Mounting Cups
- G. Lower Bolts with Rubber Pads
- H. Tension Nuts
- I. Lower Mounting Cups
- J. Extension
- K. Gate Frame + LED light
- L. Large Wrench
- M. Small Wrench
Installation

Step 1  
• Measure width of the opening.
• Refer to figures 1A, 1B, 1C to determine the correct installation.

<table>
<thead>
<tr>
<th>1A</th>
<th>1B</th>
<th>1C</th>
</tr>
</thead>
<tbody>
<tr>
<td>28 7/10”– 30 7/10”&lt;br&gt;(72.9 – 78 cm)&lt;br&gt;No Extensions</td>
<td>31 7/8”– 34 1/4”&lt;br&gt;(81 – 87 cm)&lt;br&gt;With 1 Extension</td>
<td>35 7/8”– 38 2/8”&lt;br&gt;(91 – 97 cm)&lt;br&gt;With 2 Extensions</td>
</tr>
</tbody>
</table>

Step 2  
• Adding extensions, refer to figures 2A, 2B.
• Insert extension pins into hole on the outside of the gate frame. Note: the long ends of the pins go into the gate frame, short ends go into the extension 2B.
• Slip extensions over the pins.
• Slide both the upper and lower tension bolts with rubber pads into the holes on the outside of extension.

Step 3  
• Place the gate in the opening so that the bottom of the gate frame is completely flat on the floor 3A.
• Secure the gate, fasten the mounting cups to the wall by aligning them with the bolts with rubber pads.
  Use double coated tapes or screw provided 3B.

IMPORTANT: Never install this gate without mounting cups! If installing the gate at the top of stairs, use mounting screws and cups provided.

IMPORTANT—TOP OF STAIRS NOTE: Adjust gate stopper to prevent gate door from swinging over stairs.

IMPORTANT: Do not install two extensions on the same side of the gate, as shown in figure 2C.
**Step 4**

- Tighten both of the bottom tension nuts 4A by turning them clockwise at the same time 4B.
- Tighten both of the upper tension knobs 4C by turning them clockwise at the same time, so the gap between the gate and upper right corner comes together, leave a .060” -.078” gap shown in figure 4D.

- Use the wrenches provided to ease turning the tension knobs and nuts. Figure 4E, 4F.

**Operation**

**Opening the gate locking system (see Figure 5A):**
1. Rotate the locking handle to the vertical position.
2. Depress the release button as shown.
3. Lift the door up until it swings freely.
4. Swing the door open in desired direction.

**Closing and latching the gate (see Figure 5B):**
1. Simply release the gate and allow it to swing closed (unless the Stay-Open feature is used).
2. To latch, rotate the locking handle to horizontal position, as shown in Figure 5B. This effectively “triple latches” the gate.

**Note:** Verify proper gate installation by partially opening and releasing it. The door will swing closed and double-latch automatically.
LED light

- To activate the pre-installed battery, remove the small tab from the LED socket (see figure 6A), dispose out of reach of child.
- Turn on LED light (see figure 6B).
- When placed in a dark location, the LED light will activate (see figure 6C).

LED light battery replacement

- Unscrew and take out the LED device from the socket (see figure 7A).
- Replace the old battery with a new AAA battery (see figure 7B).
- Do the reverse orders for installation (see figure 7C).

Stay-Open Feature

IMPORTANT: Stay-Open Feature should be used only by adults, because the auto-close feature will be disabled, allowing children to freely pass through the gate.

- To make use of the Stay-Open Feature, simply swing the door slightly past 90 degrees open in either direction. The door will remain open until it is swung closed.
Swing control operation

- Rotate the knob to the side on gate stopper to determine the direction the gate door will swing.

Gate opens in both directions when gate stopper is not rotated.

IMPORTANT: The direction of operating stopper can be rotated up only. Please don’t rotate down the stopper. (see figure 8A.8B)

[Diagram: Correct! gate stopper]

Troubleshooting:
If the gate does not remain closed, the locking handle is too close to the corner of the locking housing. This can be corrected by loosening the upper tension knobs by turning them outward, creating the proper distance, as described in step 4 /Figure 4D.

If the gate does not remain in its opening, it was not installed properly. Remove and reinstall the gate, make sure the gate is flat, straight, and in perpendicular to the floor, as shown in figure 3A.

Care:
CLEANING: Clean the safety gate using warm water and a mild detergent. Use a soft cloth or sponge to avoid scratches. Never use solvents or chemicals to clean the safety gate.
