Pressure mount between rooms or doorways 26.5” to 42” wide

For use with children 6-24 months

Made in the USA

PATENT PENDING

26.5–42”
23” High
Installation Instructions:
No Tools Required

1. Extend the gate in the opening.
   NOTE: Be sure to place the gate so the locking bar is on the side of the gate that will be away from the child (Fig. A).

2. Hold the panels firmly together at the top of the gate so that the panels are unable to move (Fig. B).

3. Pull the locking bar up 2 to 3 clicks and then lock down into place.
   This should put pressure on the 4 rubber bumpers holding the gate in place (Fig. C).

4. If the gate is loose in the opening, pull up 1 more click until you get a good solid fit in the opening. If the gate is too tight in the opening, do not force the locking bar down. This could put too much pressure on the gate, causing damage to your opening, the gate or both. (The locking bar should have a slight bow.) However if the bow is too large, simply lift up on the locking bar and press the white button on the latch to reduce the width of the gate (Fig. D).

5. To open the gate, simply lift up on the locking bar and remove the gate from the opening (Fig. C).

Optional Instructions:
Measure the width of the opening where the gate will be used. While holding the gate with the locking bar toward you (numbers will be upright), lift the locking bar and slide the locking pin into the slot size. (Proceed with step 2 above.)

Care and maintenance:
To clean: Wipe with a clean, soft, dam cloth and dry thoroughly.
Do not use harsh or abrasive cleaners. Always keep the rubber bumpers clean.
